

Shapes

9

Learning Outcomes

Use Cordova Smart Class Software on the smart board in class to make learning enjoyable. [Digital Learning — NEP Guidelines]

After completing this chapter, the students will be able to :

- distinguish between straight and curved lines.
- identify types of straight lines (vertical, horizontal, slant).
- identify basic 3D and 2D shapes with their observable properties.

We have already learnt about some basic shapes in class 1. Let us revise.

Use Cordova Smart Class Software on the smart board in class to do all the Exercises.

Exercise-1

(According to NEP Guidelines)
(Remembering)

1. Identify the plane shapes :

Rectangle.....

Circle.....

Square.....

Triangle.....

2. Identify the solid shapes :

Cube.....

Cuboid.....

Sphere.....

Cone.....

Cylinder.....

3. **Slanting line** : A line with a slope is called a slanting line.

Fun Time

Join the dots to get horizontal, vertical and slanting lines.

Exercise-2

(According to NEP Guidelines)
(Remembering, Understanding, Analysing)

1. Choose the correct options.

(a) Which one of the following is a letter with curved line only?

(i) N

(ii) S

(iii) P

(b) Which one of the following is a number with straight lines only?

(i) 8

(ii) 4

(iii) 5

(c) Which one of the following is a letter with both curved and straight lines?

(i) D

(ii) W

(iii) O

(d) Which one of the following is a number with curved line only?

(i) 2

(ii) 6

(iii) 1

(e) Which one of the following is a figure with straight lines only?

2. Count the horizontal, vertical and slanting lines in the given figure.

Number of horizontal lines = 7

Number of vertical lines = 6

Number of slanting lines = 3

3. How many horizontal, vertical and slanting lines are used to make the given word?

H E M A N

Number of horizontal lines = 5

Number of vertical lines = 7

Number of slanting lines = 5

TEACHER TIP

Conduct a simple paper folding activity to create a straight line. Further, extend the activity to horizontal, vertical and slanting lines. Also, explain that a ruler is used to draw straight lines in different orientation.
